

ABSTRACT

This study aimed to determine the level of stress of the AB English students on the English language learning. It utilized the descriptive method of research using the AB English students who are officially enrolled for School Year 2022-2023 as the respondents. The locale of the study was the Northern Iloilo State University Main Campus, Estancia, Iloilo. A researchers-modified Students Stress Iloilo inventory, duly validated and reliability tested was used to gather the data and was statistically treated by frequency and percentages, mean and standard deviation, independent samples t-test and one way between groups analysis of variance (ANOVA) was employed with a significance value of 0.05 alpha level. Findings revealed a moderate level of stress among AB English students in terms of personal, academic, and environmental factor, when they were taken as a whole and when they were classified
